

Subject: RoHS & REACH compliance

Dear customer,

RoHS

Donné Draad B.V. confirms that hazardous substances regulated by the EU Directive 2011/65/EU (RoHS 2) are not intentionally used in the manufacturing of our current range of cable products and compounds.

REACH

Donné Draad B.V. understands that materials produced in Europe and used in its production process, are subject to the obligations established by REACH directive (EC Regulation 1907 / 2006).

In addition, REACH classifies the main final products of Donné Draad B.V. as follows:

- Cables (both energy and telecom): articles not intentionally releasing substances

In the light of REACH requirements, these products – as not being “substances” – are not requested to be registered (with the exception of substances composing compounds exported to Europe, unless re-imported to Europe and already registered there).

Nevertheless, the above listed products have to be produced with registered substances.

If you realize that the products we supply to you, do not strictly fall in this category, please inform us, we will make a specific verification.

At the time being, Donné Draad B.V. is taking the necessary actions to ensure that materials purchased, produced in Europe, are in compliance with their relevant REACH obligations, with the aim to avoid provision disruptions.

In case there is evidence that some Donné Draad B.V. European suppliers is not acting (and / or will not) for a complete REACH compliance, Donné Draad B.V. will take – as long as possible – any action necessary for the continuity of production and sales.

REACH also focuses on a specific group of hazardous substances, named “Substances of Very High Concern” (SVHC), by establishing specific obligations regarding them. A list VHC Substances called “Candidate Substances” is updated twice per year by ECHA (the European Chemicals Agency). The presence of such substances in products put on European market, should be notified to the European customers.

At the best of our knowledge, we have no evidence that any of the "Candidate Substances" belonging to the last version of the "Candidate Substances List" released in January 2018, may exceed the 0,1% of the weight of the all the compounds we supply to you.

Best regards,

Nieuw Bergen, February 2018

Donné Draad B.V.
